MC Tablet Hybrid is an effective solution to extending Maintenance Connection to your workforce. Now your technicians can have access to their complete work assignments at their desk or even take them to the job site. Operations can utilize an inexpensive "sync and go" allowing them to work totally disconnected from the network or benefit from up to the minute connectivity with wireless devices.

Your technicians can have all the important information about the work order, tasks to complete the job and details about the asset being worked on—right at their finger tips. As well, important completion information can be entered directly in the program and uploaded to your main system next time they have a connection to the network.

The Tablet Work Orders program can be loaded on any Windows 7 device. Whether on a desktop, laptop or exciting new Windows Tablet, assigned work orders and all supporting information can be down loaded via a wired, wireless or cellular connection to the Internet from your Maintenance Connection system. And because your device runs full Windows 7, there is nothing that you cannot run with the Maintenance Connection data including VOIP, handwriting recognition, Cad, mapping, even other fully operational Windows programs

Work orders in the palm of your hand!

Arm your technicians with exactly what they need from your maintenance system. This easy to use application will become as indispensable to them as their tool kit.

Know exactly how to complete the job!

Even if the operator isn't your most experienced, the detailed task list becomes his "how to" manual helping him do the job right the first time. All your important work and safety tasks are always with the work order.

Know the asset your are working on!

Everything that your operator needs to know including previous work history, contact information and specifications for the asset being worked on, is at their finger tips.

View and modify ANY data remotely!

Whether it's a Cad drawing, GIS Map, Word document, Excel spreadsheet, even instruction video, because you are running under Windows7, every thing is available to your workforce, to view and edit, from their remote locations.
